

GoGuide Booking Platform – Project Scope Document

Purpose

The platform designed *to connect tourists with verified local guides* in **Ayodhya**. It provides a structured booking system with centralized administration to ensure trust, clarity, and smooth coordination between tourists, guides, and the platform administrator.

User Roles

1. Tourist
2. Guide
3. Admin

Each role with clearly defined responsibilities and controlled access. Tourists can explore guide profiles *without login*, enabling easy discovery and informed decision-making. *Registration* is required only at the booking stage.

The booking system designed with structured time slots, availability management, and an *optional VIP booking feature* for priority services.

Guides on boarded through a **strict verification process**, ensuring only authentic and qualified individuals listed on the platform. They can manage their profiles, availability, and view bookings, but *do not have direct control over booking approvals or payments*. This ensures operational consistency and prevents misuse.

The Admin acts as the **central authority**, maintaining full control *over all platform operations*. This includes approving guides, managing bookings, handling payments, resolving disputes, and monitoring system activity.

All financial transactions routed through the admin-controlled system, ensuring transparency and accountability. Communication between tourists and guides also mediated by the admin, reducing risks and maintaining professionalism.

From a security perspective, the platform built with **role-based access control, secure authentication, encrypted data handling, and fraud prevention mechanisms**

Overall, the system provides a **government-ready, scalable, and secure tourism infrastructure**, enabling better management of tourist services, enhancing visitor trust, and promoting organized local tourism.

Tourist (Client) Module

1. The **Tourist (Client) module** is the primary user-facing component of the platform. It designed to provide a **simple, transparent, and secure experience** for tourists seeking verified local guides.

- Ease of discovery of guides
- Trust through verified profiles
- Structured booking process
- Controlled communication
- Secure payment handling

Core Functionalities

2.1 Guide Discovery (*Without Login*)

Tourists can access the platform without registration to

- Browse available guides
- View profiles (photo, experience, pricing, reviews) □ Filter guides based on:
 - Pricing
 - Languages
 - Ratings

Objective:

Reduce friction and increase user engagement before signup.

2.2 Registration & Authentication (*Need login*)

- Book a guide
 - Make payments □ Track bookings
-

2.3 Guide Profile Viewing

Each guide profile includes:

- Profile image
- Personal details
- Experience & specialization
- Pricing (standard & VIP)
- Ratings & reviews

Transparency Mechanism:

Profiles are **admin-verified** before being visible.

2.4 Booking System

Tourists can:

- Select date and time slot
- Choose guide
- Book instantly based on availability
- Can choose location (*inside Ayodhya for now*)
- Can access booking History of his own

✓ **Payment Integration**

- Booking confirmation now linked with payment system
- Payment status tracked per booking:
 - PENDING
 - COMPLETED
 - FAILED

✓ **Cab Integration (New)**

- Users can select **Cab Required** during booking
- Enables transport along with guide service

✓ **Booking + Payment Flow**

1. Tourist creates booking
2. Guide processes booking
3. Payment is initiated
4. Booking confirmed after payment/ Cash in hand booking will available

Special Feature:

- **VIP Pass Booking**
 - Priority slots
 - Premium pricing
 - Limited availability

2.6 Communication System

- Tourists can complain or give suggestions.
- Messages are routed **only to Admin (not directly to guides)**

Purpose:

- Prevent misuse
- Maintain platform control

2.7 Payment System

- Payment required for booking confirmation □ Methods (as per your launching plan):
- UPI (redirect / QR-based) ◦ Cash-in-hand (CIH)

Payment System

A centralized payment system has introduced to ensure secure and transparent transactions.

Key Features

✓ Centralized Payments

- All payments routed through Admin
- No direct payment to guides

✓ Payment Methods

- UPI/Cards (using Razor pay)
- Cash-in-hand (CIH)

Payment Flow

1. Booking created
2. Payment record generated
3. User completes payment
4. System updates:
 - Payment status
 - Booking status

Admin Responsibilities

- Monitor all transactions
- Handle refunds
- Manage guide payouts

Security Architecture

Data Security

- Encrypted password storage
- Secure API handling

Payment Security

- No direct transfer to guides
- All payments go to **Admin-controlled system**
- UPI handled via verified redirection

Fraud Prevention

- Suspicious activity logging
- No direct contact with guides
- Admin intervention capability
- *Duplicate booking detection*

Admin Override Capabilities

- Cancel any booking
- Modify booking status
- Block users if misuse detected

- Refund management

Advantages (Pros)

For Tourists

- Easy guide discovery
- Verified and trusted profiles
- Transparent pricing
- Controlled communication (safe environment)
- Flexible payment options (UPI + CIH)

Summary:

- ☐ Tourists can confidently book guides
- ☐ The platform maintains authority over transactions and communication
- ☐ The tourism department gets a **controlled, scalable, and reliable system** Guide Module

1. The **Guide Module** designed for verified local guides to onboard, manage their services, and receive bookings through a **controlled and centralized platform**.

This module ensures:

- Only **verified guides** operate on the platform
- Guides have structured visibility and booking management

Guide Onboarding & Verification

2.1 Registration Process

Guides must submit:

- Full name and contact details
- Government ID proof (*Optional for now*)
- Address verification (*Admins checks-out manually*)
- Experience details
- Profile photo

2.2 Admin Verification (Mandatory)

- **No guide is visible without approval** ☐ Admin performs: ○ Identity verification ○ Background validation (*Admin could delete/block/Deactivate ID's*)

Outcome:

- Approved → Profile goes live
 - Rejected → Access denied
 - Pending → Under review
-

Profile Management

3.1 Guide Profile Includes

- Profile image
- Bio / introduction
- Languages spoken
- Areas of expertise
- Pricing (standard + VIP)
- Availability schedule

3.2 Editable Fields

Guides can update:

- Personal details, Pricing, Availability slots

⚠ **Restricted Fields (Admin-controlled):**

- Verification status
- Account activation
- Visibility on platform

Booking Management

4.1 Booking Visibility

Guides can view:

- Upcoming bookings
- Completed bookings
- Cancelled bookings

4.2 Booking Details Access

Includes:

- Tourist name (limited info)
- Date & time
- Booking type (Normal / VIP)
- Meeting Points (Location)

4.3 Booking Actions

Guides:

- **Cannot directly accept/reject bookings**
- Only view and prepare

⚠ *All booking decisions handled by **Admin***

Earnings & Payment Flow

5.1 Payment Structure

- Tourists pay → Platform (Admin-controlled)
- Admin → Guide payout (manual/controlled)

5.2 Guide Visibility

Guides can see:

- Total bookings, Completed services, Estimated earnings

△ *No direct payment handling by guides*

Review & Rating System

□ Tourists can submit reviews after service □

Guides can:

- View ratings
- Track performance

△ *Guides cannot edit/delete reviews*

Security Architecture

- Verified onboarding
- No public exposure of sensitive data
- Secure login (JWT-based)
- Activity monitoring
- Controlled access system

Admin Authority Over Guides

- Approve / Reject registration
- Block / Suspend accounts
- Can remove profiles
- Control visibility in listings

Advantages (Pros)

For Guides

- Access to verified tourist base
 - No need to handle payments
 - Increased trust and credibility
 - Structured workflow
-

Summary:

The Guide Module ensures:

- **Only verified professionals participate** □ Guides operate within a **controlled ecosystem** □ Admin maintains authority over:
 - Bookings
 - Payments
 - Visibility

This creates a **trusted, scalable, and government-ready tourism system**.

Admin Module

1. The Admin Module acts as the **central authority of the platform**, responsible for:

- Full operational control
- User and guide management
- Booking supervision
- Payment handling
- Security enforcement

This module ensures the platform operates in a **regulated, transparent, and government-compliant manner**.

2. Role of Admin (System Authority)

Admin is the **single controlling entity** with the ability to:

- Monitor all platform activities
- Approve or reject guides
- Control all bookings
- Manage payments and refunds (*UPI/Cash*)

Key Principle:

☞ *No critical action happens without Admin visibility or control*

3. Core Functionalities

3.1 Dashboard & Monitoring System Admin

dashboard provides:

- Total users (tourists + guides)
- Active bookings
- Revenue summary
- Pending approvals

Purpose:

Real-time visibility of entire platform activity

3.2 Guide Management

Admin can:

- Approve / Reject guide registrations
- Verify documents
- Block / Suspend guides
- Remove guides from platform

Control Level: Full authority

3.3 Tourist Management Admin

can:

- View registered users
 - Monitor booking activity
 - Block users (in case of misuse)
 - Handle complaints
-

3.4 Booking Management System

Admin has complete control over bookings:

- Approve bookings
- Cancel bookings
- Modify booking status
- Assign priority handling (VIP bookings)

Booking Status Flow:

- Pending → Confirmed → Completed / Cancelled
-

3.5 Payment Management

Admin is the **central financial authority**

Responsibilities:

- Receive all payments (UPI / CIH tracking)
 - Manage payment records
 - Handle refunds
 - Process guide payouts
-

3.6 Messaging & Communication Control

- All tourist messages (*suggestions/complaints*) are received by Admin □ Admin acts as mediator between:
 - Tourist ↔ Guide

Benefits:

- Prevents misuse
- Ensures accountability
- Enables dispute tracking

3.7 Pricing & Platform Control Admin

can:

- Set base pricing rules
- Control VIP pass pricing
- Update platform policies

Security Architecture

4.1 System-Level Security

- Role-based access control (RBAC)
- Secure authentication (JWT)
- API protection

4.2 Financial Security

- No direct guide payments
- Centralized payment flow
- Transaction tracking

4.3 Data Security

- Encrypted sensitive data
- Controlled data access
- Activity logs maintained

Admin Capabilities

- Override any booking
- Block any user or guide
- Edit (most of Data) data
- Control system visibility
- Manage platform rules

Advantages (Pros)

For Platform

- Reduced fraud
 - Controlled communication
 - Standardized operations
 - Scalable system
-

Summary:

The Admin Module is the **backbone of the platform**, ensuring:

- Full control over operations
- Secure and transparent transactions
- Balanced ecosystem between tourists and guides

☞ It transforms the platform into a **government-ready, scalable tourism infrastructure**

ADD NEW SECTION: NOTIFICATION SYSTEM

Notification System (New)

A notification system is introduced to keep users (Tourist/Guide/Driver) informed about important events.

Notification Types

- Booking Confirmation
- Booking Cancellation
- Payment Success / Failure
- Booking Reminder
- Review Reminder

Notification Flow

Event	Receiver
Booking created	Admin
Booking confirmed	Tourist
Payment success	Tourist + Admin
Before tour	Tourist
After completion	Tourist
And more.....	

Features

- Real-time updates (future: Socket.IO)
- Controlled messaging via Admin
- Read/Unread tracking

4. ADD NEW SECTION: CAB SYSTEM with LIVE TRACKING

4.1 Cab System (New Module)

The platform now supports cab services integrated with guide bookings.
This enables tourists to book transportation along with guide services.

4.2 Ride Management

Each cab booking creates a ride with :

- Pickup location
 - Drop location
 - Optional stops
 - Assigned driver
-

4.3 Ride Status Flow

- REQUESTED
 - ACCEPTED
 - STARTED
 - COMPLETED
 - CANCELLED
-

Live Tracking

Real-time driver location tracking

- *Map-based UI*
-

Multi-Stop Support

- Users can add multiple stops
 - Useful for sightseeing routes
-

- Driver ratings
- Surge pricing
- SOS safety feature
- Ride history

Future Enhancements (Tourist Module)

- Live tracking of guide (Phase 2)
- Push notifications for booking updates
- AI-based guide recommendations
- Multi-city support
- Multilingual interface

Future Enhancements (Guide Module)

- Live navigation & tracking (Phase 2)
- Automated payout system
- Real-time booking notifications
- Performance analytics dashboard
- Multi-city expansion

Future Enhancements (Admin Module)

- Automated booking approval system
- AI-based fraud detection
- Advanced analytics dashboard
- Multi-admin roles (sub-admins)
- Real-time monitoring tools
